## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 4, 5, 11 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 4 and 5 recites the limitation "the original first voltage" in line 1. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-19 are rejected under 35 U.S.C. 102(a) as being anticipated by Foss et al..

Foss et al. discloses a circuit and method having all the elements and steps as recited in claims 1-19 as follows:

Art Unit: 2818

- an enhanced driver (column 2, lines 20-22) that provides a first voltage (output voltage, column 2, lines 20-21);
- a detector (column 2, lines 31-32) wherein the detector monitors the first voltage and wherein if the first voltage falls below a predetermined value (the required word line voltage, column 2, line 36), the enhanced driver increases the first voltage to at least an optimal voltage (the correct word line voltage, column 2, line 36);
- the bootstrap circuit (column 2, line 28).

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tsujimoto discloses a DRAM device having power supply system appropriately biasing switching transistors and storage capacitors in burn-in testing process.
